**Locators, Bars & Fixed Dentures – The Secrets  
of Success and Trouble Shooting With Each**

**Anthony Sallustio, DDS**

**Wednesday, January 16, 2019 @ 7PM**

**St. Barnabas Hospital Auditorium, Livingston**

**Program Overview –**

Patients facing edentulism in one or both dental arches often have concerns of the physical, emotional, social, and functional changes that follow the loss of teeth. Today's patients have also come to expect treatment that is less invasive, cost efficient, and immediate. Data also suggests implant retained prosthetics can efficiently chew foods and improve their overall health. It is imperative that restorative dentists can diagnose and provide guidance to their patients towards predictable implant options.

**Learning Objectives:**

1. Understand the physical and emotional changes associated with edentulism.
2. How to Utilize Immediate dentures
3. Understand the differences in implant supported over dentures; stud and bar
4. Understand the critical decisions in maxillary and mandibular implant overdentures
5. Be familiar with immediate load full arch therapy
